

Portal Plus

Portal Plus matting, is designed specifically for commercial duty clean off zones. Portal Plus is a heavy duty nylon matting, with a pile density sufficient to act as a brush on footwear, which helps to remove and contain the dust. Moisture is also removed by capillary attraction in the tufting, providing an excellent moisture barrier.

Portal Plus improves indoor air quality by reducing the circulation of dust which contributes towards a reduction in absentees. The ability of Portal Plus matting to absorb sound further enhances its positive contribution to peoples comfort and wellbeing inside a building.

Fitting Instructions	Product Specifications
