

PRODUCT DATA SHEET

Tactile Ground Surface Indicators (TGSIs) are an imperative safety measure, set out in the Australian Standard AS/NZS 1428.4.

Tactiles are used to advise vision-impaired persons that there are stairs, ramps, kerbs or slopes ahead which may be a potential tripping hazard.

Novaproducts PVC TacAlert™ TGSIs conform to Australian standard requirements and in addition, offer a large range of Advantages and Benefits.

Advantages & Benefits

- Bevelled edge allows for safe direct surface installation
- Bevelled edge eliminates the risk of falls caused by tripping on raised or squared edges

- All new colours only available in 300mm x 300mm
- *While stocks last. May be MOQ required.

Adhesives

Novaproducts Global PVC TacAlert™ TGSIs are commonly supplied as Fastiles™, with a self-adhesive 'peel and-stick' backing. Suitable glues are also available from Novaproducts, including Megapoxy 2-part adhesive for maximum bond in external or heavy traffic areas.

Templates

To ensure that TacAlert™ TGSIs are installed to comply with AS/NZS 1428.4, interlocking templates are available from Novaproducts Global. Detailed installation instructions are also available on request. Templates for curves or other complex designs can be custom made – please inquire.

Luminance values

Luminance contrast of TacAlert™ TGSIs is the difference between the amount of light reflected from the tactiles and the amount of light reflected from the surrounding surface. Full details are available from Novaproducts Global and by referring to AS/NZS 1428.4
